

Storage Bridge 1.0.7 Release Notes

Fixes in Version 1.0.7 2

Upgrading Storage Bridge to Version 1.0.7 2

This document provides release information for Storage Bridge version 1.0.7.

Fixes in Version 1.0.7

No Skipped Files During Copy

Version 1.0.7 resolves a problem, which could prevent Storage Bridge from copying certain files to the extension/disaster recovery storage, if the containing folder on your recording storage/archive had been renamed several times at short intervals.

Configuring Wasabi for Tokyo (ap-northeast-1) Storage Region

In version 1.0.7 to configure Wasabi for Tokyo (ap-northeast-1) region as a disaster recovery storage and/or extension, you need to enter the URL provided to you by NTT Com Enterprise Cloud service instead of selecting the Wasabi AP Northeast 1 (Tokyo) in the Region drop-down box.

Upgrading Storage Bridge to Version 1.0.7

To upgrade Storage Bridge on your recording server(s) and the Storage Bridge plug-ins on your XProtect Management Client and XProtect Smart Client, you simply need to run the respective installation file, following the steps in the Storage Bridge Administration Guide. The upgrade procedure does not require to restart the recording server(s), the XProtect Management Client or the XProtect Smart Client. After upgrading to the new version, all configuration settings are preserved.

Important: *When upgrading the Storage Bridge plug-ins, you must close the XProtect Management Client application and the XProtect Smart Client application.*
