

Intelligent Storage and Media Management for Collaborative Content Creation

Optimize and save - reclaim your premium storage, reduce costs with local and cloud data storage tiers, restore only what you need.

8K, 4K, 2K, HD - media files keep growing and filling your expensive high-performance storage. Manually identifying and moving files to the right-priced storage volume is a full-time job. Restoring large backups when you only need a few files wastes time and space.

Maximize ROI of your premium SSD and HDD storage while keeping data available, and reduce costs with Tiger Bridge, an enterprise-class, software-only file management solution.

Preserve your existing workflows and operations while Tiger Bridge works transparently in the background. Tiger Bridge intelligently and dynamically assigns data to NAS, tape, object, cloud and intra-cloud storage tiers. Gain secure, transparent, and seamless NTFS file system extension to cloud over HTTPS (SSL/TLS) that preserves Active Directory ACLs. Enable users and applications to continue uninterrupted with on-demand file retrieval. Save precious time and space with Partial Restore to retrieve only the specific portion of media or archive you need.

Advanced Workflows and Data Protection

- Capacity Management
- Backup & Archive
- Partial File Restore
- Disaster Recovery
- Multi-site collaboration
- Intelligent, Automatic
- Cloud, Disk, Tape

Work Globally, Collaborate Remotely

Connect different sites, enjoy remote collaboration, and enable massive edge deployments. Tiger Bridge allows any number of hosts to maintain perfect sync between their file systems (file metadata or entire media sets).

Know More, Do More

Open the door to entirely new workflows and monetization avenues with cloud services: MAM/PAM, distribution, analytics, AI, and other virtual services.

Recover Fast, Keep Business Going

In the event of catastrophic failures, a backup server can quickly rescan the target to rebuild its file system using only metadata. There is no need to download any content before operations can resume. Data is restored upon being accessed.

Get the most from your storage

- Always have free space available
- Preserve your current operations
- Enable Smart Creative Content Workflows
- Manage petabytes of data
- Direct integration with Tiger Shared Storage
- Maximise ROI from any existing storage volumes - SAN, NAS, object, tape, cloud
- Reduce capital costs

How it Works

Clients use local premium virtual disk storage for high performance while policies work in the background to replicate and migrate infrequently accessed data to lower cost storage tiers and release valuable space.

Tiger BRIDGE

- ① **Tiger Bridge** dynamically tracks locally stored data.

- ② **Active** files are kept locally and accessed at full speed and low latency.

- ③ **Inactive** files are migrated to lower-cost tiers, automatically or manually.

- ④ Data is **automatically retrieved** on-demand by users or applications.

- ⑤ **Tiny stub files** are maintained and visible to applications and File Explorer.

"Tiger Bridge maintains fast and transparent access to over 1.2 million files already migrated to the cloud, making them accessible for users with the library management software they were already using locally."

- Tibor Temesi, Silicon Computers, NAVA Technical Partner

Customers in over 120 countries use Tiger Technology solutions to make their data management and project workflow easier. The company develops software only Windows cloud extension technology, high-speed NAS/SAN file system sharing, virtual volume set and virtual project workspace management, and HSM tiering and synchronization solutions. Tiger enables organizations of any size and scale to manage their digital assets on-premise, in public cloud, or with a hybrid model, and was identified by Endeavour as one of the foremost cloud technology providers on the market today.
