

# Tiger Technology for Media & Entertainment

Major storage and data management challenges for M&E businesses

- **Data security and accessibility in multi-client environments, using Windows, Linux and Mac.**
- **High-performance workflows across a shared and/or hybrid environment.**
- **No vendor-lock performance penalties.**
- **Capacity management and scalability to aid flexibility, control and cost management.**
- **Data life cycle management for protection and cost control.**
- **High Availability and Disaster Recovery with Server and Storage HA options and Continuous Data Protection.**
- **Muti-site synchronization to enable sharing data between sites with access controls and data protection.**

## Performance-optimized storage management and collaborative media workflows.

Flexibility is key to modern media and post-production studios. Users need to be able to access data from multiple locations, collaborate, share content, and do this over a unified storage and data management platform without being locked into proprietary systems solutions. Tiger Technology's unique approach is to use industry-standard file systems, open platform storage solutions and combine this into a single unified platform that allows media studios to build custom workflows from any mix of applications, client workstations or storage platforms.

## Tiger Technology gives you everything you need to store, share, manage and move your media in an “on-premises-first” and hybrid cloud workflow.

Tiger Technology's software solutions are designed around the concept of “on-premises-first” hybrid workflows for media applications. “On premises first” recognizes customers' requirements for high-performance real-time data workflow between media applications and NAS/DAS/SAN or tape storage while hybrid recognizes the need to move and manage data intelligently from in-house to the cloud.

Tiger Technology's open, no vendor lock-in approach to design means customers are never locked into specific data management strategies, Tiger Technology products or solutions.

---

Run all your creative applications

 **Tiger STORE** software is a cross-platform shared file system solution which enables you to build highly performant scalable NAS and/or SAN set-ups with almost any physical storage. Tiger Store enables high-performance collaborative media workflows across Windows, Mac and Linux supporting both SAN and/or LAN block level client connectivity. Tiger Store delivers the features required by editors, artists, and colorists using Avid, Adobe, Autodesk, Blackmagic and other software needed to ingest, edit, transcode and deliver content. Productivity and uptime are maintained with optional High Availability configurations. Add NTFS volume pooling to your shared storage workflows with the Tiger Pool add-on for Tiger Store.

 **Tiger SPACES** is a project & user management software solution that enables you to create, assign and manage virtual project workspaces, across Tiger Store managed storage and/or any NAS storage. Tiger Spaces allows you to treat all your storage as one shared storage space - no added complexities. Gain the freedom to allocate or move projects across your storage assets with no impact to users. Avid bin-locking can be optionally added for Avid workflow support.

 **Tiger BRIDGE** software can be added to any Tiger Store or Spaces environment to enable hybrid workflows. This provides a non-proprietary, software-only data management solution that blends on-premises and multi-tier cloud storage into a single usable shared storage space with no changes to workflow.

 **SPACES MAM** is a fully featured web-based media asset management tool that enables you to handle ingest, metadata, logging, search, viewing, editing and transcoding of media assets from a Tiger Spaces managed virtual workspace. The Spaces|MAM integration with Tiger Spaces controls the media flow, project definition and all metadata throughout the entire production. Through a web interface, users can search, browse, upload & download, share rough cuts with clients, and perform any actions allowed by their profile even remotely.

Supported Storage Solutions

## Tiger Technology Appliances

Tiger Serve 1U or (2U with HA capabilities) - Metadata controller (MDC) to run any Tiger Technology software modules

Tiger Box 1U8, 3U16 or 4U24 - High-performance integrated appliance to run Tiger Store plus any Tiger Technology software modules (8, 16 and 24-bay options).

Tiger Exp3U16 and Tiger Exp4U24 are high-performance expansion chassis that are designed to work in conjunction with any of the Tiger Box storage servers. 16 and 24 - 3.5" drive bays. Connects over SAS.

## Tiger Technology for M&E Highlights

**Shared Cross-  
platform File system**

**Turnkey Solutions  
for Media**

### About Tiger Technology

Founded in 2003 and headquartered in Sofia, Bulgaria and Alpharetta, GA, USA, Tiger Technology specializes in the underlying technology of hybrid cloud workflows. The company develops data management software solutions designed to help customers of any size, scale and industry optimize their on-premises storage and enhance their workflows through cloud services. Tiger Technology solutions are admin-friendly, non-disruptive, transparent, and highly cost-effective.

Tiger Technology brings over 15 years of expertise in developing high-performance storage solutions for the most demanding workflows, which includes cross-platform NAS/SAN file system sharing, storage, user, project, and media management. The company's current focus is enabling "on-premises-first" hybrid cloud workflows.

**Flexible User, Project  
& Media Management**

**Intelligent Data  
Management for  
Hybrid Workflows**

**Single Platform for  
Managing Storage,  
Users & Media**

**Single Namespace**

**Avid Bin Locking**

**High Availability**

**Archive to Tape, NAS/  
DAS/SAN or Cloud**
